

CERTIFIED FUNCTIONAL NUTRITION COUNSELOR

The 5-Day *Gut Reset*

A functional nutrition protocol to end bloating, rebuild energy,
and stop fighting your cravings — in five days.

5-DAY PLAN

SUPPLEMENT GUIDE

100% FREE

Your gut is the root of *almost everything*.

"After years of studying functional nutrition, the one thing I keep coming back to is this: almost every chronic complaint — fatigue, bloating, anxiety, weight resistance, skin issues — traces back to the gut."

I'm Julia, founder of Healthy Food Recipes Club and a Certified Functional Nutrition Counselor. I created this guide because I see the same pattern over and over: people trying to fix their health from the outside in. New workout, new supplement, new diet — and still feeling off.

The gut is where it starts. Your gut produces over 90% of your serotonin, houses 70% of your immune system, and directly influences your hormones, metabolism, and brain chemistry. When it's inflamed or out of balance, everything suffers.

This 5-day reset isn't a detox or a cleanse. It's a structured reset based on functional nutrition principles — real food, real science, and habits that actually stick.

What you'll get from these 5 days: reduced bloating, more stable energy, fewer cravings before noon, and a clear foundation to build on. Most people notice a difference within 48 hours.

THE GROUND RULES

For the next 5 days:

1 Remove the four main gut disruptors

Gluten, conventional dairy, refined sugar, and alcohol. Not forever — just 5 days to let your gut lining calm down.

2 Drink 8–10 glasses of water daily

Start every morning with 8 oz of warm water with lemon before anything else. This activates your digestive enzymes.

3 Eat within 30 minutes of waking

Your gut microbiome is most receptive in the first two hours of the day. What you feed it first sets the tone for everything.

Mindful eating shifts your nervous system into “rest and digest” mode. Nutrient absorption improves significantly.

5 foods secretly *wrecking your gut*

These are the most common culprits I see in my clients' diets. You'll want to eliminate these during your 5-day reset:

Gluten

Triggers intestinal permeability ("leaky gut") even in non-celiac individuals. Found in wheat, rye, barley, and most processed foods.

Conventional Dairy

Pasteurized dairy disrupts the microbiome balance in most adults. The casein protein also triggers inflammatory responses in the gut lining.

Refined Sugar & HFCS

Feeds harmful bacteria and yeast (Candida) in the gut. Causes blood sugar spikes that lead to the cravings cycle most people can't break.

Seed Oils

Canola, vegetable, and soybean oils are highly inflammatory omega-6 fats that damage the gut lining. Replace with olive oil, avocado oil, or coconut oil.

Alcohol

Even moderate alcohol disrupts the gut microbiome within 24 hours, increases intestinal permeability, and impairs the liver's detox function.

Artificial Sweeteners

Aspartame, sucralose, and saccharin significantly alter gut bacteria composition, reducing beneficial strains even in small amounts.

TIP FROM YOUR FNC

You don't need to remove all of these forever. The 5-day reset is about giving your gut lining a break so it can calm inflammation and start healing. After day 5, you'll reintroduce one at a time to identify what personally affects you.

OI Remove & *Reset*

TODAY'S FOCUS

Clear out the disruptors. Today is about elimination — removing the foods that inflame your gut and replacing them with anti-inflammatory alternatives. Don't worry about being perfect. Focus on removing the big four: gluten, dairy, refined sugar, alcohol.

MORNING

Warm lemon water + 2 hard-boiled eggs with avocado

8 oz warm water with juice of ½ lemon before eating. Protein + healthy fat stabilizes cortisol and blood sugar from the start.

BREAKFAST

Green smoothie bowl

Blend: spinach, frozen banana, ½ avocado, 1 tbsp chia seeds, coconut milk. Top with pumpkin seeds and fresh berries.

LUNCH

Salmon & arugula salad

Pan-seared salmon over arugula, cherry tomatoes, cucumber, olive oil + lemon dressing. Salmon is rich in omega-3s that reduce gut inflammation.

DINNER

Roasted veggie quinoa bowl

Quinoa base with roasted sweet potato, zucchini, and bell pepper. Drizzle tahini-lemon dressing. Quinoa is a complete protein and naturally gluten-free.

SNACK

Apple slices + almond butter

The fiber in apple feeds beneficial gut bacteria. Almond butter provides protein and magnesium (most people are deficient).

DAY 1 GUT HABIT

Take 3 slow breaths before every meal today. This single habit activates your parasympathetic nervous system and increases enzyme production by up to 30%.

O2 Hydrate & *Flush*

TODAY'S FOCUS

Deep cellular hydration. Most gut problems are made worse by chronic dehydration. Today you'll drink 10 glasses of water minimum, add herbal teas, and include broth. Water moves toxins out, supports peristalsis (gut movement), and lubricates the mucosal lining.

MORNING

Warm lemon ginger water + coconut yogurt with berries

Add ¼ tsp fresh grated ginger to your lemon water. Ginger is one of the most powerful anti-inflammatory compounds for the gut.

BREAKFAST

Chia pudding with mango

3 tbsp chia seeds soaked overnight in coconut milk. Top with fresh mango. Chia seeds absorb 10x their weight in water — excellent for gut motility.

LUNCH

Turkey & lettuce wraps with avocado

Romaine lettuce wraps filled with ground turkey, diced avocado, tomato, and cilantro. Squeeze of lime. Light, protein-rich, easy to digest.

DINNER

Bone broth veggie soup

Simmer bone broth with carrots, celery, onion, garlic, kale. Bone broth contains collagen and glycine that directly repair the gut lining — this is the most healing meal of the week.

EVENING

Peppermint or chamomile tea

Both calm the gut, reduce spasms, and support a transition into parasympathetic (rest & digest) mode before sleep.

DAY 2 GUT HABIT

No drinking water during meals — wait 20 minutes before and after. Drinking during meals dilutes your stomach acid and digestive enzymes, impairing protein digestion significantly.

TODAY'S FOCUS

Fermented foods and prebiotic fiber. You have trillions of bacteria in your gut — today you're going to feed the beneficial ones and crowd out the harmful ones. Fermented foods introduce live cultures; prebiotic fiber is what those cultures eat to thrive.

MORNING

Lemon water + kefir (coconut or water-based)

If you tolerate dairy, traditional kefir. Otherwise: coconut kefir or water kefir. Contains 12 strains of live cultures — more than most supplements.

BREAKFAST

Savory eggs with sauerkraut

2 scrambled eggs with wilted spinach, sliced avocado, and 2 tbsp raw sauerkraut on the side. The sauerkraut must be raw (refrigerated, not shelf-stable) for live cultures.

LUNCH

Kimchi brown rice bowl

Brown rice with edamame, shredded carrots, cucumber, sesame seeds, and 3 tbsp kimchi. Drizzle with sesame oil and coconut aminos.

DINNER

Lentil & sweet potato stew

Red lentils cooked with sweet potato, turmeric, cumin, garlic, and ginger. Serve with a spoonful of plain coconut yogurt. Lentils are one of the highest prebiotic-fiber foods available.

DAY 3 GUT HABIT

Aim for 30 different plant foods this week (count every spice, herb, seed, and vegetable).

Research shows this single metric is the strongest predictor of microbiome diversity — more than any supplement.

O4 Rest & Repair

TODAY'S FOCUS

Sleep and stress are gut health issues. Chronic stress raises cortisol, which directly reduces gut motility, disrupts your microbiome, and increases intestinal permeability. Today you slow down intentionally. The gut heals during deep sleep — prioritize 7–8 hours tonight.

MORNING

Lemon water + overnight oats with flaxseed

Oats soaked overnight in oat milk with 1 tbsp ground flaxseed, blueberries, and a drizzle of raw honey. Flaxseed is a potent prebiotic and supports healthy estrogen metabolism.

LUNCH

Mediterranean bowl

Falafel (baked, not fried) over mixed greens with hummus, cucumber, kalamata olives, cherry tomatoes, and tahini dressing. Rich in polyphenols that feed beneficial gut bacteria.

DINNER

Gentle baked salmon with asparagus

Baked salmon at low heat (275°F, 25 min) with lemon, dill, and olive oil. Served with steamed asparagus. Asparagus is one of the top prebiotic foods — excellent gut repair.

EVENING

Magnesium-rich snack + sleep prep

A small handful of pumpkin seeds (highest dietary magnesium source) 1 hour before bed.

Magnesium supports both gut motility and deep sleep. Aim to be in bed by 10:30pm tonight.

DAY 4 GUT HABIT

Take a 10-minute walk after your largest meal today. Post-meal movement significantly improves gastric emptying and reduces blood sugar spikes by up to 22%. Your gut moves better when you move.

05 DAY FIVE Rebuild & *Sustain*

TODAY'S FOCUS

Consolidate everything and set your baseline. You've removed the disruptors, hydrated deeply, fed your good bacteria, and let your body rest. Today is about locking in the habits that turn a 5-day reset into a lasting foundation. The gut doesn't change overnight — but you've made a real start.

MORNING

Lemon water + high-protein avocado salmon bowl

The recipe that started it all. Pan-seared salmon, quinoa, avocado, purple cabbage, lime. This is your go-to reset meal — memorize it. 480 cal, 42g protein.

LUNCH

Anti-inflammatory turmeric chicken bowl

Grilled chicken marinated in turmeric, ginger, garlic, and olive oil. Serve over brown rice with roasted broccoli and a tahini drizzle. Curcumin in turmeric is one of the most studied anti-inflammatory compounds.

DINNER

Celebration dinner — your choice, gut-friendly

Pick any meal from days 1–4 that you loved. Repeat it. This is how habits form: you find what works, and you make it automatic. You've earned it.

How do you feel vs Day 1? Most people report: less bloating, more consistent energy (no 3pm crash), reduced cravings, clearer skin, better sleep. These aren't coincidences. They're your gut healing.

MOVING FORWARD

The 5-day reset works because you removed, hydrated, fed, rested, and rebuilt. Now the question is: what do you keep? Start by keeping just 3 habits permanently: the morning lemon water, 30 different plants per week, and no screens during meals. Everything else is a bonus.

The 2 products I recommend to *almost every client*

Food first — always. But some nutrients and gut support mechanisms are genuinely hard to get from diet alone, especially when the gut is already compromised. These are the two I use personally and recommend consistently:

MEMBER BENEFIT 01

SuperGut GLP-1 Daily Support

GLP-1 is the hormone your gut releases to tell your brain you're full. Most people don't produce enough of it — which is why hunger and cravings feel uncontrollable, especially after years of a disruptive diet. This formula supports your body's natural GLP-1 production, reduces cravings, improves digestion, and helps you feel satisfied longer. I recommend starting it on Day 3 of your reset, when your gut lining has had 48 hours to calm down.

MEMBER BENEFIT 02

Seed DS-01® Daily Synbiotic

Think of it this way: SuperGut manages your GLP-1 signals and cravings. Seed builds the microbiome foundation that makes everything else possible. 24 clinically-studied strains of probiotics and prebiotics in one capsule — colonizing your gut with the bacteria your body needs to regulate mood, immunity, digestion, and metabolism. Third-party tested, science-backed, and the only probiotic I've consistently seen make a measurable difference in my clients. Take one capsule daily, ideally with your morning meal.
